

Ideation Phase

Define the Problem Statement

Date	25 June 2026
Team ID	
Project Name	Human Development Index (HDI) Predictor
Maximum Marks	2 Marks

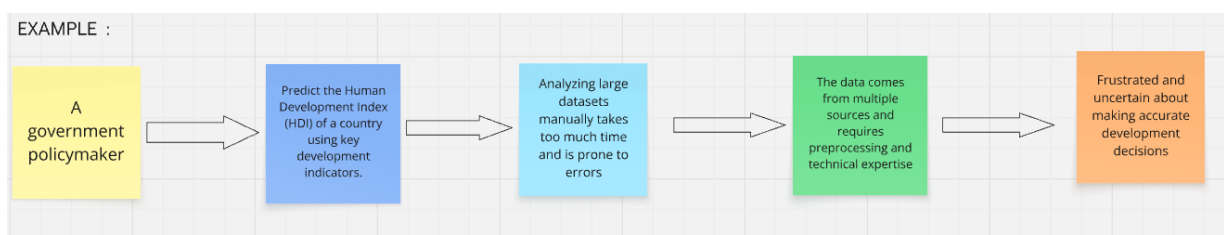

Customer Problem Statement :

The **Customer Problem Statement** identifies the real-world challenges faced by users while analyzing and predicting the Human Development Index (HDI) of different countries. It helps understand the users' goals, pain points, and expectations, enabling the development of an accurate and user-friendly machine learning solution.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A government policymaker	Predict the Human Development Index (HDI) of a Country to support development planning and policy decisions.	Analyzing large development datasets manually is slow, complex, and prone to errors.	The data comes from multiple sources, requires preprocessing, and needs machine learning expertise for accurate prediction.	Frustrated and uncertain about making timely and evidence-based development decisions.
PS-2	A development researcher	Analyze and compare HDI scores across countries to identify development gaps and trends.	Extracting meaningful insights from large datasets is difficult and time-consuming.	The dataset contains multiple indicators, missing values, and complex relationships that require advanced analytical techniques.	Overwhelmed and less confident in producing accurate and reliable research findings.
