Project Name	Human Development Index (HDI) Predictor
Maximum Marks	4 Marks

Empathy Map Canvas:

The Empathy Map Canvas was created to better understand the perspectives, needs, and challenges of the users of the **Human Development Index (HDI) Predictor**. The team analyzed users' thoughts, observations, actions, and concerns to identify the key factors influencing their decision-making process.

Through this exercise, the team identified major pain points such as time-consuming manual analysis, inconsistent socio-economic data, and delayed policy decisions. It also highlighted user expectations, including accurate HDI predictions, interactive visualizations, and reliable insights. These findings helped ensure that the proposed HDI Predictor addresses real user needs and supports effective, data-driven development planning.

Example:

Example: HDI Predictor in Policy Decision Making

Component	Description
User	Government Policymaker
Objective	Predict the Human Development Index (HDI) to support evidence-based policy planning and decision-making.
Input Data	Socio-economic indicators such as GDP per capita, Life Expectancy, Education Index, and other development-related features.
Processing	The machine learning model analyzes the input data and predicts the Human Development Index (HDI).
Output	Predicted HDI score, comparative visualizations, performance insights, and analytical reports.
Business Value	Enables faster analysis, improves prediction accuracy, supports informed policy decisions, and reduces manual effort.
